

Kamagata Japanese Maple

Acer palmatum 'Kamagata'

Height: 4 feet

Spread: 3 feet

Sunlight:

Hardiness Zone: 5b

Description:

An unbelievable introduction, this dwarf looks exactly like a miniature version of a large Japanese maple, even has its own trunk; beautiful fall colors, excellent for bonsai and containers or as a rock garden accent

Ornamental Features

Kamagata Japanese Maple is primarily valued in the landscape or garden for its ornamental upright and spreading habit of growth. It has attractive light green foliage edged in red which emerges rose in spring. The small lobed palmate leaves are highly ornamental and turn outstanding shades of yellow, orange and red in the fall.

Landscape Attributes

Kamagata Japanese Maple is a dense deciduous tree with a strong central leader and an upright spreading habit of growth. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This is a relatively low maintenance tree, and should only be pruned in summer after the leaves have fully developed, as it may 'bleed' sap if pruned in late winter or early spring. It has no significant negative characteristics.

Kamagata Japanese Maple is recommended for the following landscape applications;

- Mass Planting
- Rock/Alpine Gardens
- General Garden Use
- Container Planting

Planting & Growing

Kamagata Japanese Maple will grow to be about 4 feet tall at maturity, with a spread of 3 feet. It tends to be a little leggy, with a typical clearance of 1 foot from the ground. It grows at a slow rate, and under ideal conditions can be expected to live for 60 years or more.

This tree does best in full sun to partial shade. You may want to keep it away from hot, dry locations that receive direct afternoon sun or which get reflected sunlight, such as against the south side of a white wall. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil pH, but grows best in rich soils. It is somewhat tolerant of urban pollution, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This is a selected variety of a species not originally from North America.

Kamagata Japanese Maple is a fine choice for the yard, but it is also a good selection for planting in outdoor pots and containers. With its upright habit of growth, it is best suited for use as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when grown in a container, it may not perform exactly as indicated on the tag - this is to be expected. Also note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
